Every day is filled with some clever math problem, but there is no room to write notes or appointments. This would be a fine math book with date displays, but it should not be marketed as a calendar.

Featuring games, stories, brainteasers, and fascinating graphics, this popular calendar stimulates curiosity, opens up the imagination, and provides entertainment for every day of the year. The box for each date contains a problem whose solution is the date itself - the challenge lies in figuring out how to arrive there, and possibly discovering more than one method. In addition, every month offers a treasure trove of information: how random numbers shape the landscape, Zeno's zany paradoxes, the Mbius strip, prime twins, mathematical connections between codes, new technologies, the workings of lighthouses, and much more.
